

Link LMS data to Nuventive for learning outcomes improvement

Deliver on your institution's goals for learning outcomes improvement

To help institutions advance student assessment, Nuventive Connect-LMS visualizes assignment and rubric scores from your learning management system (LMS) within Nuventive's assessment and planning solution for in-depth analysis and improvement.

Each technology does what it does best, with reports and dashboards visualizing LMS data displayed in Nuventive in the context of the plans and improvements needed.

Nuventive's powerful analytics help institutions deliver high-impact results across program review, general education, and other outcomes-related assessment and planning.

Pair LMS data with powerful, interactive analytics in Nuventive

As an integral part of the Nuventive Improvement Platform, Nuventive Connect-LMS supports your ability to deliver data-informed improvement across your student assessment. Using the LMS as the foundation of student-level assessment, Connect-LMS uses the LMS assessment data to build powerful interactive analytics in Nuventive.

This provides a straightforward way to aggregate and understand outcomes in the context of the plans and initiatives institutions are managing, while reducing the burden on faculty and staff.

Use Nuventive Connect-LMS to:

- + Aggregate/disaggregate outcomes in context of improvement plans.
- + Reduce burden on faculty and staff by leveraging each solution's strengths.
- + Support improvement in cross-departmental programs like Gen Ed.
- + Deliver iterative action by combining the best thinking with the best information.

Overcome faculty burdens by using the LMS as the student assessment entry point

The combined solution reduces obstacles for faculty, so they can focus on using results from outcomes analysis. By taking the rubrics and outcomes they embed in the LMS and analyzing them in Nuventive, there is no need for duplicate data entry.

Users have the freedom to decide which assessments to use from various options, including embedded rubrics, learning outcomes, specific assignments, and even multiple assessments from different courses or sections.

Visualize data from Canvas, Blackboard, and D2L

Nuventive Connect - LMS works seamlessly with popular learning management systems (such as Canvas by Instructure, Blackboard Learn, and D2L Brightspace) to leverage the inherent individual student assessment capabilities of those systems while providing flexible, powerful, and actionable reporting.

Analyze aggregated and disaggregated data and support cross-departmental programs

By visualizing LMS data in the Nuventive Improvement Platform, you can empower analysis of aggregated and disaggregated student and program outcomes data by demographic, using student information system (SIS) data, mapped in context to institutional plans and initiatives.

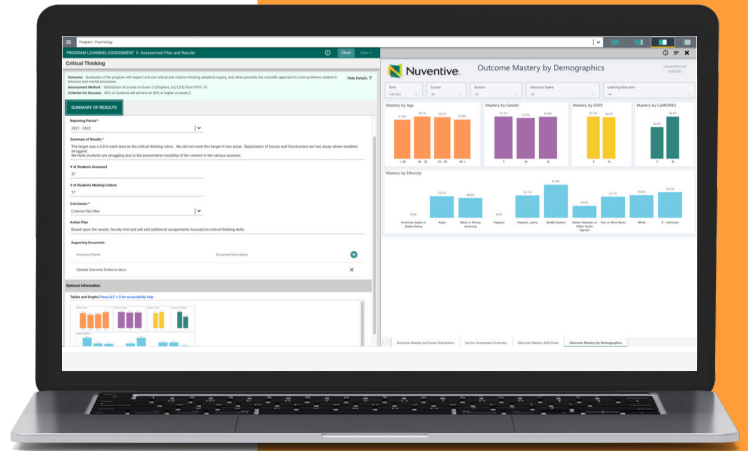

This reporting provides users an easy way to view aggregated assessment data in friendly, interactive dashboards, facilitating analysis and data-informed improvements at various levels: outcome, course section, course, discipline, and program. Assessment teams determine which data to display and which users can view that information within Nuventive.

General Education Outcomes assessment is an example of how Nuventive Connect - LMS helps organize and illuminate institutional efforts. Faculty embed and assess rubrics and outcomes within the LMS, from which Nuventive Connect - LMS pulls the resulting data. There, the data is clearly visualized in analytics dashboards and enhanced with student demographic data for a powerful assessment experience.

Discover, disseminate and improve effective practice

By mapping your LMS data in context with your plans and initiatives, Nuventive empowers you to deliver iterative action by easily distributing reports to combine people's best thinking with the best information available.

Faculty and staff can eliminate the need to "reinvent the wheel" – they can see what worked elsewhere to make effective use of institutional knowledge.

Ready to embark on a transformational journey for learning outcomes?

By capitalizing on the inherent student assessment capabilities in the LMS, Nuventive Connect-LMS puts your existing assessments to work for you – delivering brilliant analytics that foster data-informed improvement at all levels of your institution.

Your journey toward a sustainable culture of data-informed excellence starts now.
